SAFETY AT WORK

PAVIMACH®

UTILIZATION

PAVIMACH® can be assembled according to requirements - size and shape of machine - and placed under each machine to protect the floor.

Outside the perimeter of the machine the flooring can continue, so creating a non-slip flooring area for the operator, with V-shaped collection space, on which the machine operator can walk.

This flooring area consists of platforms set in the flooring itself.

DECLARATION OF CONFORMITY OF THE FLOORING

The **PAVIMACH®** platform complies with the safety requirements provided for by the DIN 51130 standards - Determination and assessment of the non-slip characteristics of the floors used in work areas.

PAVIMACH® is manufactured and marketed by: MOLARDI MARCO <i>Via Papini 41/43 - 43036 Fidenza (PR) Italy</i>

FLOORING WITH PLATFORM INSERTED

- The system and path of the flooring can be modified according to requirements, by moving the modules and re-hooking them with connecting strips.

FLOORING FOR FLOORING AREA AND COLLECTION TRAYS UNDER THE MACHINE

1. Lift the machine with suitable jacks.
2. Insert the trays, as per design, putting them side-by-side and hooking them together with connecting strips.
3. Lower the machine and level it.

Beyond the perimeter of the machine base we can continue with the trays hooked to each other by inserting the special platforms, so creating a non-slip flooring area for the operator, with V-shaped collection space, on which the machine operator can walk.
